

Myriota

Myriota has developed a unique remote Internet of Things (IoT) satellite connectivity platform to provide affordable access to small amounts of valuable data from any location in the world. From agriculture, maritime, mining, asset tracking, meter reading, transport and logistics, Myriota provides low cost, long battery life, direct-to-orbit connectivity from any location on earth.

Myriota was formed in 2015 to commercialise technology developed during a \$12m research program at the University of South Australia. Myriota was recently awarded South Australian New Business of the year at the 2017 Telstra Business Awards. Myriota has several successful deployments throughout Australia and is on track for full commercial launch of its product in 2018.
