

Dr Paul Harrison – Head of Innovation, Mainstream Aquaculture

Paul co-founded Mainstream Aquaculture in 2001 with a vision to create an environmentally sustainable “business for the future” based on best practice aquaculture technology. From a concept in 2001 Mainstream has grown to become a leading Australian aquaculture company with a strong domestic presence that underpins an export business supplying live seed-stock to 21 countries.

As Managing Director of Mainstream Aquaculture from 2001-2012, Paul steered the company through its start-up and formative years. Paul currently has responsibility for Strategy and Innovation in this rapidly growing business.

He holds a PhD in aquatic biology, has worked in Australia and abroad, and is uniquely qualified with a strong track record in business management, research and development, aquaculture system design and aquaculture operations spanning hatcheries to production.
